DETAILED ACTION

Claims 1-25 are pending in the application.

Information Disclosure Statement

The information disclosure statement, file 3/21/05, complies with the provisions of 37 CFR 1.97, 1.98 and MPEP02 § 609. It has been placed in the application file, and the information referred to therein has been considered as to the merits.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Drent et al. {US Pat. 5,780,684}.

Drent et al. teach that primary alcohols can be prepared from secondary or tertiary alcohols or ketones comprising reacting a compound selected from a secondary, tertiary alcohol or ketone with carbon monoxide and hydrogen in the

Art Unit: 1621

presence of a catalyst as defined by the present claim 1 (see Examples 18-20; Col. 1, lines 12-18; Col. 3, lines 19-43; and Col. 4, lines 39-57). The difference from the presently claimed invention and what the Drent et al. reference teaches is that the Drent et al. does not exemplify using hydrogen gas in combination with carbon monoxide. However, Drent et al. explicitly teach that hydrogen gas may be added in the hydroformylation reactions carried out by Drent et al.

It would have been *prima facie* obvious to one having ordinary skill in the art, in view of the teachings of the Drent et al., to arrive at the presently claimed invention because Drent et al. teach a similar process for producing primary alcohols using the same material process in which the same catalyst is employed in the hydroformylation reaction.

One having ordinary skill in the art, desiring to arrive at other alternative methods for producing primary alcohols, would have been motivated to not only start out with secondary, tertiary alcohols or ketones as reactants but also to use hydrogen gas in combination with carbon monoxide. Therefore the presently claimed invention would have been obvious to one having ordinary skill in the art.

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter: Claim 25 is unobvious over the prior art of record because the prior art of record does not teach or suggest the process as defined by claim 25.
